

I loved to hear that people are interested in land stewardship. Men do too, but it seems that women are more sensible toward it.

Utilize MG training in new, innovative ways

lack of women in animal processing

science-based research learning vs. non-science based learning

examine our language about "women's brains" rather: thinking/learning/action styles are a spectrum

I was encouraged by hearing about a program that supports minorities and women in Idaho. I wish they consider or search about a local vegetation to grow as a specialty crop that does not need high input of resources like irrigation

Start small. Provide the leadership

Kiva Zip loans

Mistakes are part of learning

Building bridges between all farmers so that consumers see the importance of ag in the food system

finding the right balance between networking and content in developing & delivering programs

male/female behavior is a continuum not an absolute

providing opportunities to learn from mistakes

Background in specialty crops/value-added. Women more willing to try new things

Extension agents "act" like experts without small-scale experience

Division exists between women from commodity farms vs. small innovative farming operations

language skills
